### **Notification**

# Withdrawal of 80 food additives, which are no longer distributed in Japan, from the List of the Existing Food Additives

## **Purpose**

The Ministry of Health, Labour and Welfare (hereinafter referred to as "MHLW") intends to withdraw 80 food additives from the List of the Existing Food Additives.<sup>1</sup>

Currently these 80 food additives have been found to be no longer distributed in Japan and are supposed to be withdrawn from the List and consequently will be prohibited for use on and after 18 May 2011 at the latest. These 80 food additives are identified in Ministry of Health, Labour and Welfare Notification No. 215, which was issued on 18 May 2010, for comments from public.

#### **Background**

According to Article 2-3 of the Supplementary Provisions of Law No.101 of 1995 (Law to Partially Revise the Food Sanitation Law and Nutrition Improvement Law<sup>2</sup>), the Minister of Health, Labour and Welfare is responsible for its risk management decision to withdraw food additives from the List of the Existing Food Additives in the Ministry of Health and Welfare Announcement No. 120, 1996, when it is determined that food additives concerned, or preparations or foods containing them are no longer marketed. Such decision should be made, taking into account thoroughly the actual situation of the sale, manufacturing, import, processing, use, storage, and display of the substances.

In this decision making process, the Minister publishes a notification listing food additives concerned intended to be withdrawn, for the purpose of seeking public comments. According to the provision and process above, 70 additives have been withdrawn in the past 7 years since 2003.

In the identification of the 80 food additives mentioned above, the MHLW took into consideration carefully outcome of a survey carried out in 2009 addressing substances in the situation that their distribution was unknown.

The survey was aimed at examining the situation on sale, manufacturing, import, processing, use, storage, and display of such substances in the market in Japan. Through a thorough analysis of the survey result, the MHLW concluded that they were no longer distributed in the domestic market. Individual names of 80 food additives are identified in the attachment..

<sup>&</sup>lt;sup>1</sup> "Existing food additives" refer to non-synthetic food additives that were marketed or used on the date of the amendment of the Food Sanitation Law (May 24, 1995) and that appear in the List of Existing Food Additives.

<sup>&</sup>lt;sup>2</sup> The Nutrition Improvement Law is the present Health Promotion Law.

Criteria for the selection of the 80 substances for withdrawal<sup>3</sup> are as follows:

- a. Those whose distribution was not confirmed in Japan;
- b. Those whose distribution was confirmed but whose use as food additives was not confirmed<sup>4</sup>: and
- c. Those for which requests for withdrawal were filed by their manufacturers: Catechin, Crayfish colour, Copal resin, Sphingolipid (bovine brain), and Dammar resin.

The MHLW submitted a report containing the result of the survey on the 80 food additive-list and the conclusion above to the Subcommittee on Food Additives, a consultative body assigned by the Minister. The Subcommittee considered them and agreed to give the following advice to the Minister, which was suggesting that it would be appropriate to withdraw these 80 additives from the List the List of the Existing Food Additives.

#### Action to be taken

Following the issuance of the Notification No.215 on 18 May 2010, the MHLW should take its decision making process. This process includes seeking public comment during a six-month period. Timeline of this process is as follows:

1. On <u>May 18 2010</u>: Published the Notification No.215listing food additives for withdraw.

# • <u>Comment period (6 months, including WTO notification)</u>

Those who claim to modify the list should submit an application to the MHLW with documents which prove actual distribution of the additives concerned, or preparations or food containing them in the market in Japan.

- 2. <u>November 17 2010</u>: Due date for comment submission.
- 3. In another six month period, the List of the Existing Food Additives will be revised to

<sup>&</sup>lt;sup>3</sup> Natural flavoring agents, which are obtained from animals and plants or mixtures of thereof for flavoring to food, are outside the scope of this activity.

<sup>&</sup>lt;sup>4</sup> As mentioned in the background, the use of these substances is not prohibited as long as they are used as ingredients of food commodities.

formally withdraw these additives. The List will come into force on <u>18 May 2011</u> at the latest. Thereafter, the use of them as food additives is prohibited.

	cacao beans and whose main component is carbon.	
12	Gastric mucin(ガストリックムチン)	65

# List of Existing Food Additives To Be Withdrawn (As of May 2010)

	A substance which is obtained from mammals' gastric	
	mucosae and whose main components are	
	mucopolysaccharides.	
13	Catechin (カテキン)	70
14	Crayfish colour (カニ色素)	72
	A substance which is obtained from crayfish shells or	
	eyes and whose main component is astaxanthin.	
15	Aloe extract (キダチアロエ抽出物)	94
	A substance which is obtained from the leaves of	
	Kidachi aloe (Aloe arborescens MILL.) and whose	
	main components are polysaccharides.	
16	Phellodendron bark extract (キハダ抽出物)	100
	A substance which is obtained from the bark of	
	phellodendron trees ( <i>Phellodendron amurense</i> RUPR.)	
	and whose main component is berberine.	
17	Gutta hang kang (グッタハンカン)	113
	A substance which is obtained from the exudation of	
	gutta hang kang trees (Palaquium leiocarpum	
	BOERL.) and whose main components are amyrin	
	acetate and polyisoprenes.	
18	Green tuff (グリーンタフ)	116
19	Mulberry bark extract (クワ抽出物)	133
	A substance which is obtained from the rhizome	
	skins of mulberry and whose main components are	
	stilbene derivatives and flavonoids.	
20	Gentian root extract (ゲンチアナ抽出物)	136
	A substance which is obtained from gentian roots or	
	rhizomes and whose main components are	
	amarogentin and gentiopicroside.	
21	Enzymatically modified licorice extract (酵素処理カン	140
	ゾウ)	
	A substance which is obtained by adding glucose to	
	licorice extract (refer to No. 88 Licorice extract) using	
	cyclodextrin glucosyltransferase and whose main	
	components are $\alpha$ -glucosylglycyrrhizic acids.	
22	Enzymatically modified tea extract (酵素処理チャ抽出	141

	物)	
	A substance which is obtained by adding glucose to	
	tea extract (refer to No. 232 Tea extract) using	
	cyclodextrin glucosyltransferase.	
23	Enzymatically hydrolyzed coix extract (酵素分解ハトム	147
20	ギ抽出物)	141
	A substance which is obtained by enzymatically	
	hydrolyzing the seeds of Job's tears (Coix lacryma-Jobi	
	<i>var. ma-yuen</i> STAPF).	
24	Copal resin (コーパル樹脂)	155
	A substance which is obtained from the exudation of	
	copal trees and whose main component is	
	agathenedicarboxylic acid.	
25	Cobalt (コバルト)	156
26	Resin of depolymerized natural rubber (ゴム分解樹脂)	160
	A substance which is obtained from rubber (refer to	
	No. 159 Rubber) and whose main components are	
	diterpenes, triterpenes and tetraterpenes.	
27	Enzymatically decomposed rice bran (コメヌカ酵素分 解物)	162
	A substance which is obtained from defatted rice	
	bran and whose main components are phytic acid and	
	peptides.	
28	Bamboo grass colour (ササ色素)	165
	A substance which is obtained from the leaves of	
	bamboo grass and whose main component is	
	chlorophyll.	
29	Cane wax (サトウキビロウ)	166
	A substance which is obtained from cane stems and	
	whose main component is myricyl palmitate.	
30	Sandarac resin (サンダラック樹脂)	171
	A substance which is obtained from the exudation of	
	sandarac trees and whose main component is	
	sandaracopimaric acid.	
31	Shikon colour [Lithospermum root colour] (シコン色	180
	素)	

A substance which is obtained from the roots of murasaki (Lithospermum erythrorhizon SIEBOLD et ZUCCARINI) and whose main component is shikonin.         32       Jamaica quassia extract (ジャマイカカッシブ抽出物)         A substance which is obtained from the trunks/branches or bark of Jamaica quassia trees and whose main components are quassin and neoquassin.       185         33       Calcinated calcium (焼成カルシウム)       187         Calcinated calcium (焼成カルシウム)       187         Calcinated calcium (焼成カルシウム)       187         Calcinated calcium (焼成カルシウム)       187         Calcinated calcium is defined as a substance which is obtained by calcinating sea urchinshells, shells, coral, whey, bones or eggshells and whose main components are calcium compounds. This time, calcinated calcium obtained from sea urchinshells will be expected to be withdrawn.       193         34       Sclero gum [Scleroglucan] (スクレロガム)       193         A substance which is obtained from the culture fluid of <i>Sclerotium glucanicum</i> and whose main components are polysaccharides.       197         35       Sphingolipid (スフィンゴ脂質)       197         Sphingolipid is defined as a substance which is obtained from bovine brains or rice bran and whose main components are sphingosine derivatives. This time sphingolipid obtained from bovine brains will be expected to be withdrawn.       203         36       Sesamolin (セナモリン)       203         37       Sesbania gum (セスバニアガム)       205         A substance which is obt	[

37Sesbania gum (セスバニアガム)205A substance which is obtained from sesbania seeds and whose main components are polysaccharides.20538Sorva [Leche caspi] (ソルバ)212A substance which is obtained from the exudation of sorva trees and whose main components are amyrin acetate and polyisoprenes.212		expected to be withdrawn.	
A substance which is obtained from sesbania seeds and whose main components are polysaccharides. 38 Sorva [Leche caspi] (ソルバ) 212 A substance which is obtained from the exudation of sorva trees and whose main components are amyrin acetate and polyisoprenes.	36	Sesamolin (セサモリン)	203
and whose main components are polysaccharides.         38       Sorva [Leche caspi] (ソルバ)       212         A substance which is obtained from the exudation of sorva trees and whose main components are amyrin acetate and polyisoprenes.       212	37	Sesbania gum (セスバニアガム)	205
38       Sorva [Leche caspi] (ソルバ)       212         A substance which is obtained from the exudation of sorva trees and whose main components are amyrin acetate and polyisoprenes.       212		A substance which is obtained from sesbania seeds	
A substance which is obtained from the exudation of sorva trees and whose main components are amyrin acetate and polyisoprenes.		and whose main components are polysaccharides.	
sorva trees and whose main components are amyrin acetate and polyisoprenes.	38	Sorva [Leche caspi] (ソルバ)	212
acetate and polyisoprenes.		A substance which is obtained from the exudation of	
		sorva trees and whose main components are amyrin	
39         Sorvinha (ソルビンハ)         213		acetate and polyisoprenes.	
	39	Sorvinha (ソルビンハ)	213
A substance which is obtained from the exudation of		A substance which is obtained from the exudation of	
sorvinha trees (Couma utilis MUELL.) and whose		sorvinha trees (Couma utilis MUELL.) and whose	
main components are amyrin acetate and		main components are amyrin acetate and	

	polyisoprenes.	
40	L-Sorbose (L-ソルボース)	214
41	Tannin (extract) (タンニン (抽出物))	226
	Tannin is defined as a substance which is obtained	
	from Japanese persimmon fruits, chestnut astringent	
	skins, Japanese gall, tamarind seed coats, angelica	
	powder, nutgall or silver wattle bark and whose main	
	components are tannin and tannic acid. This time,	
	tannin obtained from chestnut astringent skins or	
	tamarind seed coats is expected to be withdrawn.	
42	Dammar resin (ダンマル樹脂)	227
	A substance which is obtained from the exudate of	
	trees of Shorea spp., Hopea spp., or Agathis spp. and	
	whose main components are resin and	
	polysaccharides.	
43	Tea seed saponin (チャ種子サポニン)	231
	A substance which is obtained from tea seeds and	
	whose main components are saponins.	
44	Chilte (チルテ)	233
	A substance which is obtained from the exudation of	
	chilte trees (Chidoscolus elasticus LUNDELL) and	
	whose main components are amyrine acetate and	
	polyisoprenes.	
45	Tunu (ツヌー)	235
	A substance which is obtained from the exudation of	
	tunu trees (Castilla fallax COOK) and whose main	
	components are amyrine acetate and polyisoprenes.	
46	Depolymerized natural rubber (低分子ゴム)	238
	A substance which is obtained by decomposing the	
	exudation of para rubber trees and whose main	
	components are polyisoprenes.	
47	Tourmaline (電気石)	244
48	Cholesterol (動物性コレステロール)	248
	A substance which is obtained from fish oil or lanolin	
	(refer to No. 395 Lanolin) and whose main component	
	is cholesterol.	

49	Dokudami extract (ドクダミ抽出物)	249
10	A substance which is obtained from the leaves of	
	dokudami (Hauttuyniae coradata THUNB.) and	
	whose main component is isoquercitrin.	
50	Triacylglycerol lipase (トリアシルグリセロールリパー	258
	ゼ	
51	Quassia extract (ニガキ抽出物)	268
	A substance which is obtained from the	
	trunks/branches or bark of <i>nigaki</i> trees ( <i>Picrasma</i>	
	quassioides BENN.) and whose main component is	
	quassin.	
52	Niger gutta (ニガーグッタ)	269
	A substance which is obtained from the exudation of	
	niger gutta trees (Ficus platyphylla DELILE.) and	
	whose main components are amyrin acetate and	
	polyisoprenes.	
53	Absinth extract (ニガヨモギ抽出物)	270
	A substance which is obtained from the whole	
	absinth grass and whose main components are	
	sesquiterpenes.	
54	Nystose (ニストース)	271
55	Olibanum (ニュウコウ)	273
	A substance which is obtained from the exudation of	
	olibanum trees and whose main components are $\alpha$ -	
	and $\beta$ -boswellic acids.	
56	Garlic extract (ニンニク抽出物)	275
	A substance which is obtained from garlic bulbs and	
	whose main components are allylsulfides.	
57	Paffia extract (パフィア抽出物)	281
	A substance which is obtained from the roots of paffia	
	(Paffia iresinoides SPRENGEL) and whose main	
	components are ecdysteroids and saponins.	
58	Isodonis extract (ヒキオコシ抽出物)	288
	A substance which is obtained from the stems or	
	leaves of hiki-okoshi (Isodon japonicus HARA)and	
	leaves of min broshi (isodon japonicus initici)and	

59	Himematsutake extract (ヒメマツタケ抽出物)	295
00	A substance which is obtained from the mycelium or	200
	fruit body of <i>hime-matsutake</i> (Agricus blazei MURR.)	
	or its culture fluid.	
60	Pimento extract (ピメンタ抽出物)	296
	A substance which is obtained from pimento fruits	
	and whose main components are eugenol and thymol.	
61	Hesperetin (ヘスペレチン)	331
62	Powdered annatto (ベニノキ末色素)	335
	A substance which is obtained from annatto seeds	
	and whose main components are norbixin and bixin.	
63	Venezuelan chicle (ベネズエラチクル)	338
	A substance which is obtained from the exudation of	
	Venezuelan chicle trees and whose main components	
	are amyrin acetate and polyisoprenes.	
64	Pepper extract (ペパー抽出物)	339
	A substance which is obtained from pepper fruits and	
	whose main components are feruperines.	
65	Garden balsam extract (ホウセンカ抽出物)	348
	A substance which is obtained from the whole plant	
	of garden balsam and whose main component is	
	naphthoquinone.	
66	Hokosshi extract (ホコッシ抽出物)	349
	A substance which is obtained from the seeds of	
	hokosshi (Psoralea corylifolia O.KZE.) and whose	
	main component is bakuchiol.	
67	Massaranduba chocolate (マッサランドバチョコレー	359
	ト)	
	A substance which is obtained from the exudation of	
	massaranduba chocolate trees and whose main	
	components are amyrin acetate and polyisoprenes.	
68	Massaranduba balata (マッサランドババサラ)	360
	A substance which is obtained from the exudation of	
	massaranduba balata trees and whose main	
	components are amyrin acetate and polyisoprenes.	
69	Methylthioadenosine (メチルチオアデノシン)	372

	A substance which is obtained from <i>Saccharomyces</i>	
	spp. and whose main component is	
	5'-dehydroxy-5'-methylthioadenosine.	
70	Mousouchiku charcoal extract (モウソウチク炭抽出物)	377
	A substance which is obtained by extraction from the	
	carbonized stems of <i>mousou-chiku</i> bamboo	
	(Phyllostachys heterocycla MITF.).	
71	Morin (モリン)	385
72	Montan wax (モンタンロウ)	386
	A substance which is obtained from brown coal or	
	lignite and whose main components are esters of fatty	
	acids and tetracosyl-triacontanyl alcohol or	
	hexacosyltriacontanyl alcohol.	
73	Vegetable oil soot colour (油煙色素)	388
	A substance which is obtained by burning vegetable	
	oils and whose main component is carbon.	
74	Eucalyptus leaf extract (ユーカリ葉抽出物)	389
	A substance which is obtained from eucalyptus leaves	
	and whose main components are $\beta$ -diketones.	
75	Linter cellulose (リンターセルロース)	405
	A substance which is obtained from single cotton	
	filament and whose main component is cellulose.	
76	Leche de vaca (レッチュデバカ)	410
	A substance which is obtained from the exudation of	
	leche de vaca trees ( <i>Brosimum utile</i> (H.B.K.) PITT.)	
	and whose main components are esters of amyrin.	
77	Levan (レバン)	411
	A substance which is obtained from the culture fluid	
	of <i>Bacillus subtilis</i> and whose main components are	
	polysaccharides.	
78	Lemon peel extract (レモン果皮抽出物)	412
	A substance which is obtained from lemon peels and	
	whose main components are geraniol and citral.	
79	Rosidinha (ロシディンハ)	416
	A substance which is obtained from the exudation of	
	rosidinha trees (Sideroxylon) and whose main	

	components are amyrin acetate and polyisoprenes.	
80	Wasabi extract (ワサビ抽出物)	419
	A substance which obtained from the rhizomes or	
	leaves of wasabi (Wasabia japonica MATSUM.) and	
	whose main component is isothiocyanate
