● : Commodities for which MRLs are to be lowered or deleted.

○ : Commodities for which MRLs are to be increased or newly set. (\*It should be noted that the residue definition will be changed.)

\* The uniform limit 0.01 ppm will be applied to commodities for which draft MRLs are not given in this table and to commodities not listed above.

Note: The residue definition for agricultural products and aquatic products is Flutolanil only. The residue definition for animal products will be changed to "sum of Flutolanil and metabolites which are transformed to 2-trifluoromethylbenzoic acid moiety by hydrolysis, expressed as Flutolanil". The current residue definitions are "Flutolanil only" for agricultural products and aquatic products; and "sum of Flutolanil and metabolite D[ $\alpha,\alpha,\alpha$ -trifluoro-3'-hydroxy-o-toluanilide] including its free form, glucuronic acid conjugates and sulfate conjugates, expressed as Flutolanil" for animal products.

※: The current MRL of 1 ppm in milled rice will be deleted because the MRL of 2 ppm in rice will be set. MRLs in row agricultural commodities also apply to their processed commodities (including milled rice) taking into account the processing factors, unless specific MRLs are set in the processed commodities.
