Black tea — Specification
TECHNICAL COMMITTEE REPRESENTATION

The following organizations were represented on the Technical Committee.

Egerton University
Agriculture and Food Authority- Tea Directorate
Ministry of Health — Public Health Department
Government Chemist’s Department
Melvin Mash International Ltd
Unilever Tea Kenya Ltd
Kenya Plant Health inspectorate Service
Finlays Tea
Tea Research Foundation of Kenya
Ministry of industry, Trade and cooperatives
Kenya Agricultural and Livestock organization
Ministry of Agriculture
Kenya Tea Development Agency Ltd
Institute of Packaging of Kenya
Consumer Information Network
Kenya Bureau of Standards- Secretariat

REVISION OF KENYA STANDARDS

In order to keep abreast with the progress in the industry, Kenya Standards shall be regularly reviewed. Suggestions for improvements to published standards, addressed to the Managing Director, Kenya Bureau of Standards, are welcome.
Black tea — Specification
DKS 65:2016

Foreword
This Kenya Standard has been prepared by the Tea Technical Committee under the guidance of the Standards Projects Committee and it is in accordance with the procedures of the Kenya Bureau of Standards.

The need to revise this standard has arisen from the increased need to accommodate technological innovations and the desire to position the Kenya tea as high quality offering in the tea world market. Thus, there is a general need to address both economic and nutritional concerns. In the said dispensation, the standard promotes fair trade, safeguards the interests of the stakeholders and guarantees enhanced safety of the consumers.

During the preparation of this standard, reference was made to the following documents:

ISO 1839: Sampling of tea.
ISO 1572: Preparation of ground tea sample.
ISO 3720: Black tea — Definitions and basic requirements.
ISO 16050: Determination of aflatoxin in foods.

Acknowledgement is hereby made for the assistance derived from these sources.
Black tea — Specification

1 Scope

This Kenya Standard specifies requirements and methods sampling and test of black tea of the species Camellia sinensis (Linneaus) O. Kuntze. This standard does not apply to flavoured teas and decaffeinated black teas.

2 Normative references

The following publications contain provisions which, through reference in this text, constitute provisions of this standard. At the time of publication, the edition indicated was valid. For undated references, the latest edition of the normative document referred to applies.

4 Requirements

2 KEBS 2016 — All rights reserved
4.1 General requirements

For purposes of this standard, the following definitions shall apply:

3.1 black tea

Tea derived solely and exclusively produced by acceptable processes (notably withering, leaf maceration, aeration and drying) from the tender shoots of varieties of the species Camellia sinensis (Linnaeus) O. Kuntze, known to be suitable for making tea for consumption as a beverage.

3.2 Extraneous matter

Any material of tea origin such as twigs, bark, and stems.

3.3 Foreign matter

Any material which is not tea leaf, flavor used or fragments of tea plant e.g., sand, stones, metallic chips and any organic matter other than extraneous matter.

3.4 Contaminants

Any physical or chemical or biological agent, foreign matter, or any other substances not intentionally added to food which may compromise food safety or suitability.

3.5 Adulterant

Any material intentionally added that changes the original composition and compromises the quality and safety of black tea.

3.6 Filth

Any material such as, but not limited to, dead insects, rodents and their derivatives.

3.7 Taint

Taste and odour foreign to tea.

4 Requirements

4.1 General requirements

Black tea shall comply with the following:

4.1.1 Shall be of uniform colour.

4.1.2 Shall be of typical texture and appearance.

4.1.3 Shall have a typical flavour and taste.

4.1.4 Shall be free from unpleasant or repulsive odours but may have a typical aroma.

4.1.5 Shall be free from contaminants.
4.1.6 The tea shall have no taint and shall be reasonably free from extraneous matter. Liquor for assessment of taint shall be prepared by method specified in KS ISO 3103.

The assessment shall be described in the test report using terms defined in KS ISO 6078.
4.2 Compositional quality requirements/limits

4.2.1 The black tea shall comply with the requirements/limits specified in Table 1.

**Table 1 — Chemical requirement for black tea.**

<table>

<td>(ix)</td>
<td>Total Catechins content%, (m/m), min</td>
<td>7</td>
<td>KS ISO 14502-2</td>
</tr>
</tbody>
</table>

<sup>a</sup> When the alkalinity of water-soluble ash is expressed in terms of millimoles of KOH per 100 g of ground sample, the limits shall be: 17.8 min.; 53.6 max.

<sup>b</sup> The specific method for the determination of crude fibre in tea is specified in ISO 15598, however for the purpose of routine estimation, the general method specified in ISO 5498 is adequate. In cases of dispute, the method of determination should always be that specified in ISO 15598. The requirement of 16.5 % mass fraction remains unchanged regardless of the method used.

4.3 Preparation of tea liquor for sensory analysis

Tea liquor for sensory analysis should be prepared in accordance to ISO 3103

5. Hygiene

5.1 It is recommended that the products covered by the provisions of this standard be prepared and handled in accordance with the appropriate sections of KS EAS 39, and other relevant Kenya standards and regulations. The products should comply with any microbiological criteria established in accordance with CAC/GL 21

5.2 The products shall comply with any microbiological criteria established in accordance with Table 2 below.

8 Contaminants

The product covered by this standard shall comply with the maximum levels of CODEX STAN 193 and the maximum residue limits for pesticides established by the Codex Alimentarius Commission (CAC).

8.1 Heavy metals

Heavy metal contaminants, if present, shall comply with the limits specified in Table 2.

Table 2 — Heavy metal contaminant limits in black tea

8.2 Mycotoxin residues

Total aflatoxin levels in black tea shall not exceed 10 ppb with B 1 not exceeding 5 ppb when tested according to KS ISO 16050.

8.5 Pesticide residues

The products covered by the provisions of this standard shall conform to those maximum limits for pesticide residue limits established by the Codex Alimentarius Commission for these products in codex Stan 193;
7 Environment

Black tea shall be produced, processed and handled under conditions complying with the stipulations of the Environmental Management and Co-ordination Act (EMCA), No.8 of 1999 of the Laws of Kenya, on environmental management and complying with cleaner production technological practices.

7 Packaging

7.1 The tea shall be packed in suitable, clean and dry containers, made of material, which does not change the tea quality (preserves tea quality)

7.2 The fill of the package shall comply with the Weights and Measures Act, Cap. 513 of the Laws of Kenya.

7.3 The disposal of used package and condemned black tea shall be carried out in compliance with the Environmental Management and Coordination Act (EMCA), Waste Regulations, 2006 of the Laws of Kenya on disposal of solid and liquid wastes.

11 Labelling

8.1 In addition to the provisions of the General Standard for the Labelling of Prepackaged Foods; KS EAS 38, the following specific provisions apply:

i) product name as “Black Tea”;
ii) name, address and physical location of the manufacturer/ packer/ importer/ exporter;
iii) date of manufacture;
iv) expiry date;
v) method of manufacturing;
vi) the declaration “Food for Human Consumption”;
vii) storage instructions as “Store in a Cool Dry Place, Away from Contaminants and direct sunlight”;
viii) lot/batch/code number;
ix) net weight in g or kg;
x) instructions on disposal of used package; and
xi) country of origin

8.2 A declaration of any inaccurate information in marking/labelling is prohibited and shall be punishable by law under the Standards Act, Cap. 496, of the Laws of Kenya.

11 Sampling

Sampling of black tea for analysis shall be carried out in compliance with KS ISO1839.
