Camembert Cheese — Specification
TECHNICAL COMMITTEE REPRESENTATION

The following organizations were represented on the Technical Committee:

Kenya Dairy Board
Ministry of Health — Public Health Department
Ministry of Agriculture, Livestock and Fisheries — State Department of Livestock
Ministry of Agriculture, Livestock and Fisheries — Department of Veterinary Services
Egerton University — Department of Dairy and Food Science Technology
Government Chemist’s Department
National Public Health Labs
Kenya Industrial Research and Development Institute (KIRDI)
Consumer Information Network
New Kenya Creameries Cooperative (NKCC)
Brookside Dairy Ltd.
Eldoville Dairies Limited
Githunguri Dairy
Happy Cow Ltd
Sameer Agriculture and Livestock (K) Limited KIBIDAV Ltd (TOGGS)
Kenya Bureau of Standards — Secretariat

REVISION OF KENYA STANDARDS

In order to keep abreast with the progress in the industry, Kenya Standards shall be regularly reviewed. Suggestions for improvements to published standards, addressed to the Managing Director, Kenya Bureau of Standards, are welcome.
Camembert Cheese—Specification
Foreword

This Kenya Standard was prepared by the Milk and Milk Products Technical Committee under the guidance of the Standards Project Committee and it is in accordance with the procedures of the Kenya Bureau of Standards.

Cheese is a very nutritious food which consists of a concentration of the constituents of milk, principally fat, casein and insoluble salts, together with water, in which small amounts of soluble salts, lactose, and albumin from milk are coagulated.

There are various types of cheese that are produced and marketed worldwide. This Kenya Standard specifies the requirements for the type of soft ripened cheese being marketed in Kenya as Camembert cheese.

This standard includes a list of food additives, terminology and classification of cheeses, amongst other technical requirements which are important in checking cheese under the regulatory system to prevent adulteration.

In the preparation of this standard useful information was derived from members of the technical committee, Codex general standard for Camembert cheese (CODEX STAN 276-1973) and local manufacturers.
Camembert Cheese— Specification

1 Scope

This Kenya Standard specifies requirements and methods of sampling and test for camembert cheese intended for direct consumption or for further processing, in conformity with the description in Clause 3 of this standard.

This Kenya Standard applies to Camembert cheese made from cow’s milk

2 Normative references

The following referenced documents are indispensable for the application of this standard. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

3 Description

Camembert is a soft surface ripened; primarily mould ripened cheese in conformity with the General Standard for Cheese (KS 28-1), which has a shape of a flat cylinder or sectors thereof. The body has a near white through to light yellow colour and a soft-textured (when pressed by thumb), but not crumbly texture, ripened from the surface to the center of the cheese. Gas holes are generally absent, but few openings and splits are acceptable. A rind is to be developed that is soft and entirely covered with white mould but may have red, brownish or orange coloured spots.

Whole cheese may be cut or formed into sectors prior to or after the mould development.

Camembert intended for further processing need not exhibit the same extent of ripening when justified through technical and/or trade needs.

Carré de Camembert is a soft surface ripened cheese with a square shape and which comply with all other criteria and requirements specified for Camembert.

4 Essential composition and quality factors

4.1 Raw materials

Cow milk and products obtained from cow milks complying with relevant Kenya standards.
4.2 Permitted ingredients

- Starter cultures of harmless lactic acid and/or flavour producing bacteria and cultures of other harmless micro-organisms, including either Penicillium candidium and/or Penicillium camemberti and Penicillium caseicolum Geotrichum candidum, Brevibacterium linens, and yeast;
- Rennet or other safe and suitable coagulating enzymes;
- Sodium chloride and potassium chloride as a salt substitute; complying with KS CODEX STAN 150
- Calcium chloride in an amount not more than 0.02 percent (calculated as anhydrous calcium chloride) of the weight of the dairy ingredients, used as a coagulation aid
- Potable water; complying with KS EAS 12
- Safe and suitable enzymes to enhance the ripening process;
- Safe and suitable processing aids;
- Rice, corn and potato flours and starches: Notwithstanding the provisions in the General Standard for Cheese (CODEX STAN 283-1978), these substances can be used in the same function as anti-caking agents for treatment of the surface of cut, sliced, and shredded products only, provided they are added only in amounts functionally necessary as governed by Good Manufacturing Practice, taking into account any use of the anti-caking agents listed in clause 6.

Compositional modifications beyond the minima and maxima specified above for milkfat and dry matter are not considered to be in compliance with section 4.3.3 of the General Standard for the Use of Dairy Terms (CODEX STAN 206-1999).

4.4 Essential sizes and shapes

Maximum height: approx. 5 cm;
Weight: Whole cheese of flat cylinder (Camembert) or square (Carré de Camembert): approx. 80 g to 500 g.

6 Food additives

Only those additives classes indicated as justified in the table below may be used for the product categories specified. Within each additive class, and where permitted according to the table, only those food additives listed below may be used and only within the functions and limits specified.

DKS 2682: 2016
5. Hygiene Requirements

5.1 It is recommended that the products covered by the provisions of this standard be prepared and handled in accordance with the appropriate sections of KS 2194:2009 and other relevant Kenya standards and regulations. The products should comply with any microbiological criteria established in accordance with KS CAC/GL 21

5.2 The products shall comply with any microbiological criteria established in accordance with Table 2 below.

7.3 Mycotoxin residues
Camembert cheese shall not have more than 0.05ppb aflatoxin m1 content when tested according to KS ISO 14501:2007/ AOAC 974.17 and AOAC 980.21, Aflatoxin M1 in milk and cheese-thin layer chromatographic methods

7.4 Total Antibiotic residues
Camembert cheese shall not have more than 10.0 ppb total antibiotic residues as (beta lactam) content when tested according to AOAC 982.14, 15, 16, 17 and 18 and AOAC 962.14, Beta-lactam Antibiotics in milk

7.5 Veterinary Drug Residues
In addition to the maximum limits in table 6 below; the products covered by the provisions of this standard shall conform to those maximum limits for veterinary drug residue limits established by the Codex Alimentarius Commission for these products in codex Stan 193;

8 PACKAGING AND LABELLING
8.1 Packaging

The product shall be packed in food grade material that ensures product safety and integrity.

8.2 Labelling

In addition to the provisions of the General Standard for the Labelling of Prepackaged Foods; KS EAS 38 and the General Standard for the Use of Dairy Terms (CODEX STAN 206-1999), the following specific provisions apply:

8.2.1 Name of the food

The Product names shall be Camembert and Carré de Camembert, provided that the product is in conformity with this Standard. Where customary in the country of retail sale, alternative spelling may be used.

The term “Carré de” may be replaced by other appropriate term(s) related to shape that are suitable in the country of retail sale.
The use of the names is an option that may be chosen only if the cheese complies with this standard. Where the name is not used for a cheese that complies with this standard, the naming provisions of the General Standard for Cheese (KS 28-1) apply.

The designation of products in which the fat content is below or above the reference range but above the absolute minimum specified in section 4 of this Standard shall be accompanied by an appropriate qualification describing the modification made or the fat content (expressed as fat in dry matter or as percentage by mass whichever is acceptable in the country of retail sale), either as part of the name or in a prominent position in the same field of vision.

The designation may also be used for cut, sliced, shredded or grated products made from cheese which cheese is in conformity with this Standard.

8.2.2 Country of origin

The country of origin (which means the country of manufacture, not the country in which the name originated) shall be declared. When the product undergoes substantial transformation in a second country, the country in which the transformation is performed shall be considered to be the country of origin for the purpose of labeling.

8.2.3 Declaration of milkfat content

The milk fat content shall be declared in a manner found acceptable in the country of retail sale, either;

i) as a percentage by mass,

ii) as a percentage of fat in dry matter, or

iii) in grams per serving as quantified in the label, provided that the number of servings is stated.

8.2.3 Nutrient Declaration

Nutritional claim shall be made in accordance with the Guidelines for the Use of Nutritional Claims (CAC/GL 23-1997)

8.2.4 Date marking:

i) Date of manufacture

ii) Expiry date;

iii) Storage instructions and / or conditions

8.2.5 Name and address of manufacturer

8.2.6 Net weight content

8.2.7 Brand name of the product

8.2.8 Batch or code number

8.2.9 Labelling of non-retail containers

If necessary, storage instructions, shall be given either on the container or in accompanying documents, except that the name of the product, lot identification, and the name of the manufacturer or packer shall appear on the container, and in the absence of such a container, on the product itself. However, lot identification and the name
and address may be replaced by an identification mark, provided that such mark is clearly identifiable with the accompanying documents.

9 Methods of Analysis and Sampling

The methods of sampling and analysis shall be those provided in the normative references listed in Clause 2 of this standard.
ANNEX A– ADDITIONAL INFORMATION
(Informative)

The additional information below does not affect the provisions in the preceding sections which are those that are essential to the product identity, the use of the name of the food and the safety of the food.

1. Method of manufacture

1.1 Fermentation procedure: Microbiologically derived acid development.

1.2 Type of coagulation: Coagulation of the milk protein is typically obtained through the combined action of microbial acidification and proteases (e.g. rennet) at an appropriate coagulation temperature.

For the purpose of comparative nutritional claims, the minimum fat content of 45% fat in dry matter constitutes the reference.

2 For instance, repackaging, cutting, slicing, shredding and grating is not regarded as substantial transformation.
