Common Name	IUPAC Name Identification Numbers	Minimum degree of purity of the active substance <sup>1</sup>	Date of approval	Expiry date of approval	Product type	Specific conditions
Peracetic acid generated from tetraacetylene diamine and sodium percarbonate	IUPAC Name: Peroxyethanoic acid  EC No: 201-186-8 CAS No: 79-21-0  Precursors :  IUPAC Name: N,N'-ethane- 1,2-diylbis(N- acetylacetamide) EC No: 234-123-8 CAS No: 10543-57-4  IUPAC Name: Sodium percarbonate	The specification for peracetic acid generated <i>in situ</i> is based on the precursors tetraacetylene diamine and sodium percarbonate. The minimum purity of tetraacetylene diamine is 99.0% and the minimum purity of the sodium percarbonate is 85.1%	1 January 2019	31 December 2028	2	The authorisations of biocidal products are subject to the following conditions:  1) The product assessment shall pay particular attention to the exposures, the risks and the efficacy linked to any use covered by an application for authorisation, but not addressed in the Union-level risk assessment of the active substance.  2) In view of the risks identified for the uses assessed, the product assessment shall pay particular attention to: a) industrial and professional users; b) surface water for products used in laundry disinfection in closed washing machine in households.
					3	The authorisations of biocidal products are subject to the following conditions:  1) The product assessment shall pay particular attention to the exposures, the risks and the efficacy linked to any use covered by an application for authorisation, but not addressed in the Union-level risk assessment

<sup>1</sup> The purity indicated in this column was the minimum degree of purity of the active substance evaluated. The active substance in the product placed on the market can be of equal or different purity if it has been proven to be technically equivalent to the evaluated active substance.
