Fermented Camel milk — Specification
TECHNICAL COMMITTEE REPRESENTATION

The following organizations were represented on the Technical Committee.
Kenya Dairy Board
Ministry of Health — Food Safety Unit
Directorate of Livestock Production
Directorate of Veterinary Services
Egerton University — Department of Dairy and Food Science Technology
Government Chemist’s Division
National Public Health Labs service
Kenya Industrial Research and Development Institute (KIRDI)
Consumer Information Network
New Kenya Creameries Cooperative (NKCC)
Brookside Dairy Ltd.
Eldoville Dairies Limited
Githunguri Dairy
Happy Cow Ltd
Sameer Agriculture and Livestock (K) Limited
KIBIDAV Ltd (TOGGS)
Kenya Camel Association (KCA)
Regional Pastoral livelihood resilience Project
Agricultural sector Development Support programme (ASDSP)
University of Nairobi
Kenya Bureau of Standards — Secretariat

REVISION OF KENYA STANDARDS

In order to keep abreast with the progress in the industry, Kenya Standards shall be regularly reviewed. Suggestions for improvements to published standards, addressed to the Managing Director, Kenya Bureau of Standards, are welcome.
Fermented Camel milk — Specification
Foreword

This Kenya Standard was prepared by the milk and milk Products Technical Committee under the guidance of the Standards Project Committee and it is in accordance with the procedures of the Kenya Bureau of Standards.

The Camel sub sector has the potential to substantially contribute to Kenya’s socio-economic development, food security and livelihood. This can be achieved by promoting domestic, intra-regional and international market access for camel dairy products. This will improve the livelihoods of value chain players including agro-pastoralists and pastoralists. Therefore camel milk products produced and marketed should meet the required National and international standards. Among the camel milk products being consumed and are popular with consumers is the fermented camel milk traditionally known as Suusa hence the need to develop a national standard to address the safety and quality concerns and also promote product diversification.
Fermented Camel milk — Specification

1  Scope

This Kenyan Standard specifies the requirements and methods of test and sampling for “Suusa”– a fermented camel milk product

3 Definitions

For the purposes of this standard, the following definition shall apply.

3.1 Suusa
Shall mean fermented camel milk made from pasteurized whole or fat reduced camel milk as per the KS 2062: 2017.

3.2 Back sloping
Refers to using good quality suusa (based on characteristic of quality fermented milk) as liquid starter culture.

4 Product Description

Suusa is a traditional fermented camel milk product. The fermentation is spontaneous based on inherent and environmental microorganisms. It is white, of low-viscosity with a distinct smoky flavor and astringent taste. Suusa is prepared using two methods. Firstly, the traditional method (homemade) which requires fresh camel milk to be fermented in a pre-smoked gourd (using flaming acacia twig) and incubated naturally at ambient temperature (25–30°C) for 1–2 days. The second method improves on the process by pasteurizing the milk, cooling it to 25 to 30°C and inoculating at 2-3% using good quality suusa (back sloping). This is left to ferment for 24-48 hours at room temperatures. Thereafter it’s cooled, packed and distributed.

5 Essential ingredients

The temperature of milk shall be raised to not less than 72°C and not more than 80°C and retained within this range for 15 s and immediately and rapidly cooled to 4°C or less.

5.1 Raw materials
Pasteurised whole or fat reduced camel milk.

5.2 Culture
Good quality suusa shall be used for inoculation.

5.3 Plain suusa
None except stabilizers, emulsifiers, thickeners and pH adjusters in Table 1

| Table 1 — Stabilizers, emulsifiers and thickeners for fruit yoghurt |
|-------------------------|------------------|
| Name                    | Maximum level mg/kg |
| Alginates               | 5                |
| Agar                    | 5                |
| Edible gums             | 5                |
| Cellulosides            | 5                |
| Pectin                  | 5                |
| Gelatin                 | 10               |
5.4 Other types of suusa

5.4.1 Flavours

5.4.1.1 Fruit suusa may contain the following flavours:
   a) essences and extracts derived from fruit or parts of fruit, and
   b) synthetic equivalents of essences.

5.4.1.2 Flavoured suusa may contain the following flavours
   a) essences and extracts derived from fruit or parts of fruit, and
   b) synthetic equivalents of essences.

5.4.2 Food colours

Other types of suusat may have colours exclusively from substances as a result of carry-over or of vegetable source complying with Table 2.

5.2.3 Stabilizers, emulsifiers and thickeners

Suusa may contain approved stabilizers, emulsifiers and thickeners which shall be used are listed in Table 1.

5.2.4 Preservatives

Preservatives shall not be added to suusa.

6 Essential composition and quality requirements
General Requirements

a) Suusa should not have any foreign matter
b) Should not have any odour
c) Should have a characteristic taste and flavor when tested using the methods stipulated in KS 05 – 746, Methods of sensory analysis of foods.
d) Shall be free flowing and shall not whey off.

7. Food additives

Food additives may be used in preparation of fermented camel milk as provided for by CAC.

8 Contaminants

Fermented camel milk shall comply with the maximum levels of CODEX STAN 193 and the maximum residue limits for pesticides and veterinary drugs established by the Codex Alimentarius Commission (CAC).

### 8.2 Mycotoxin residues

Fermented camel milk shall not have more than 0.015 ppb aflatoxin M1 content when tested according to KS ISO 14501 or AOAC 980.21.

### 8.3 Veterinary drug residues

Pasteurized camel milk shall comply with those maximum limits for veterinary drug residue limits established by the Codex Alimentarius Commission in; Codex general standard for contaminants and toxins in foods and feed (Codex Stan 193)

#### 8.3.1 Antibiotic residues

Fermented camel milk shall not have more than 10.0 ppb beta lactam content of antibiotic residues as beta lactam content when tested according to AOAC 962.16 and when analyzed by the appropriate approved methods as given in the Food, Drugs and Chemical Substances Act, Cap. 254 of the Laws of Kenya and the CODEX guidance.

### 8.5 Pesticide residues

Fermented camel milk shall conform to the maximum limits for pesticide residues, established by the Codex Alimentarius Commission for these products in Codex general standard for contaminants and toxins in foods and feed (Codex Stan 193)

### 9 Hygiene

KEBS 2016 — All rights reserved
9.1 Fermented camel milk shall be handled in accordance with KS 1552:2016 and other relevant Kenya standards and regulations.

10 Weights and measures

The weight and measures of the Fermented camel milk shall be in accordance with the Weight and Measures Act Cap 513

Fill of container

The milk shall occupy not less than 90 % v/v of the water capacity of the container. The water capacity of the container is the volume of distilled water at 20 °C, which the sealed container will hold when completely filled.

11 Packaging

The Fermented camel milk shall be packaged in food grade, sanitized and sealed containers

12 Labelling

In addition to the provisions of the General Standard for the Labelling of Prepackaged Foods; KS EAS 38 and the General Standard for the Use of Dairy Terms (CODEX STAN 206-1999), the following specific provisions apply:

a) Name of the product shall be declared in accordance with categories defined in clause 5, as ‘fermented whole camel milk’, ‘fat reduced fermented camel milk’ or ‘fat free fermented camel milk’.

b) List of Ingredients in descending order of proportion; Indicate source of gelatin if used as an ingredient

c) Net content by volume or mass in SI units

d) Name and address of the manufacturer, importer, exporter, vendor packer or distributor
DKS 2707: 2016

e) Country of origin
f) Date of manufacture
g) Expiry date
h) Storage instructions
i) Lot identification

13 Sampling

Sampling shall be done in accordance to with KS ISO 707
