DRAFT FOR COMMENTS  
as of 23 May 2017

[Date stamp here]

ADMINISTRATIVE ORDER

No. _______ _______ _______ _______

SUBJECT:  REVISED REGULATORY GUIDELINES CONCERNING FOOD ADDITIVES, AND PROCESSING AIDS

I. RATIONALE

The 1987 Philippine Constitution declares under Article II, Section 15 to "protect and promote the right to health of the people and instill health consciousness among them." Republic Act 9711 or the Food and Drug Act of 2009, Section 3 declares that it is "a policy of the State to adopt, support, establish, institutionalize, improve and maintain structures, processes, mechanisms and initiatives that are aimed, directed and designed to: (a) protect and promote the right to health of the Filipino people; and (b) help establish and maintain an effective health products regulatory system and undertake appropriate health manpower development and research, responsive to the country's health needs and problems. Pursuant to this policy, the State must enhance its regulatory capacity and strengthen its capacity with regards to inspection, licensing and monitoring of establishments and the registration and monitoring of health products." The Implementing Rules and Regulations of RA 9711 further states that Food and Drug Administration (FDA) is tasked to "establish standards and quality measures for food and adopt measures to ensure quality and safe supply of food in the country."

Furthermore, Republic Act 10611 or the Food Safety Act of 2013, Section 9 states that the Department of Health - Food and Drug Administration (DOH-FDA) "shall set the mandatory food safety standards and that these shall be established on the basis of science, risk analysis, scientific advice from expert body/bodies, standards of other countries, existing Philippine National Standards (PNS) and the standards of the Codex Alimentarius Commission (Codex), where these exist and are applicable." Administrative Order (AO) No. 88-A s. 1984 and Bureau Circular (BC) No. 2006-0016 need updating to meet the current and emerging trends in food manufacturing. In view of the above and consistent with the requirements of the World Trade Organization on Technical Barriers to Trade in overcoming technical obstacles in world markets, these guidelines aim to update and put together the list of permitted food additives and prescribe standards for their use and application in food distributed in the Philippines whether locally manufactured or imported.
II. OBJECTIVES

These guidelines are meant to achieve the following objectives:

1. To establish guidelines prescribing:
   a. The condition under which a food additive may be safely used; and
   b. The maximum quantity of food additive which may be used or permitted to remain in or on such food;

2. To meet the demand for specific guidance on the use of food additives and ensure food safety, with the increasing awareness for safe food;

3. To harmonize local food regulation with international food control laws, rules and regulations and to ensure market access opportunities; and

4. To update the list of permitted food additives and prescribe guidelines for their use and application in food distributed in the Philippines.

5. To provide guidelines in the approval of proposed new Food Additives.

III. SCOPE

This Order shall apply to all manufacturers, importers, exporters, traders, wholesalers and distributors of food products.

IV. DEFINITION OF TERMS

As used in this document, the terms below shall be defined as follows:

1. Food Additive means any substance not normally consumed as a food by itself and not normally used as a typical ingredient of the food, whether or not it has nutritive value, the intentional addition of which to food for a technological (including organoleptic) purpose in the manufacture, processing, preparation, treatment, packing, packaging, transport or holding of such food results, or may be reasonably expected to result (directly or indirectly), in it or its by-products becoming a component of or otherwise affecting the characteristics of such foods. The term does not include contaminants or substances added to food for maintaining or improving nutritional qualities.\(^1\)

2. Flavoring Substances refers to flavor preparations composed of substances derived from plant/animal products and/or chemically synthesized substances whose significant function in food is flavoring rather than nutritional.\(^2\)

\(^1\) Codex Alimentarius Procedural Manual.
\(^2\) Administrative Order 88-B s. 1984 (Rules and Regulations Governing the Labelling of Prepackaged Food Products Distributed in the Philippines)
3. **Processing Aid** means any substance or material, not including apparatus or utensils, and not consumed as a food ingredient by itself, intentionally used in the processing of raw materials, foods or its ingredients to fulfil a certain technological purpose during treatment or processing and which may result in the non-intentional but unavoidable presence of residues or derivatives in the final product.\(^1\)

4. **Enzymes** are proteins capable of catalyzing biochemical processes, acting on specific substrates and in relative low amounts.

5. **Artificial/synthetic Food Colors** are derived from petroleum distillates or coal tars and are essentially synthetic chemicals created in laboratories.

6. **Natural Food Colors** are derived from plant, animal or mineral sources which have been processed in some way.

7. **Acceptable Daily Intake** or ADI refers to an estimate by the JECFA of the amount of a food additive, expressed on a body weight basis, that can be ingested daily over a lifetime without appreciable health risk.\(^3\)

8. **Maximum Use Level** of an additive is the highest concentration of the additive determined to be functionally effective in a food or food category and agreed to be safe by the Codex Alimentarius Commission. It is generally expressed as mg additive/kg of food. The maximum use level will not usually correspond to the optimum, recommended, or typical level of use. Under GMP, the optimum, recommended, or typical use level will differ for each application of an additive and is dependent on the intended technical effect and the specific food in which the additive would be used, taking into account the type of raw material, food processing and post-manufacture storage, transport and handling by distributors, retailers, and consumers.

9. **GMP** refers to Good Manufacturing Practice

10. **FAO** refers to Food and Agriculture Organization

11. **FCC** refers to Food Chemicals Codex

12. **GSFA** refers to General Standard for Food Additives

13. **CCFA** refers to Codex Committee on Food Additives

15. **JECFA** refers to Joint FAO/WHO Experts Committee on Food Additives.

16. **WHO** refers to World Health Organization.

17. **US FEMA** refers to United States Flavor Extracts Manufacturers Association.

---

\(^1\) Codex Alimentarius Procedural Manual.

\(^2\) Administrative Order 88-B s. 1984 (Rules and Regulations Governing the Labelling of Prepackaged Food Products Distributed in the Philippines)

\(^3\) Administrative Order 1984-1985 (Rules and Regulations Governing the Labelling of Prepackaged Food Products Distributed in the Philippines)
V. GENERAL GUIDELINES

A. General Principles for the Use of Food Additives

The use of food additives in conformance with this Order requires adherence to all the principles set forth in the following provision:

1. Food Additive Safety

   a. Only those food additives which present no appreciable risk to health of the consumer at the proposed level of use for specified food category as assessed by JECFA, present no appreciable health risk to consumers at the use levels proposed.

   b. The inclusion of a food additive shall have taken into account any ADI, or equivalent safety assessment established for the additive by JECFA and its probable daily intake from all food sources. Where the food additive is to be used in food eaten by special groups of consumers (e.g., diabetics, those on special medical diets, sick individuals on formulated liquid diets) account shall be taken of the probable daily intake of the food additive by those consumers.

   c. The quantity of an additive added to food is at or below the maximum use level and is the lowest level necessary to achieve the intended technical effect. The maximum use level may be based on the application of procedures as recommended by JECFA, the intake assessment of Codex members or upon request by the CCFA to JECFA for an independent evaluation of national intake assessment.

2. Justification for the Use of Additives

The use of food additives is justified only when such use has an advantage, does not present an appreciable health risk to consumers, does not mislead the consumer, and serves one or more of the technological functions (see Annex A for the Food Additives Functional Classes, Definitions and Technological Purposes) and the needs set out below from (a) to (d), and only where these objectives cannot be achieved by other means that are economically and technologically practicable:

a. To preserve the nutritional quality of the food; an intentional reduction in the nutritional quality of a food would be justified in the circumstances dealt with in (b) and also in other circumstances where the food does not constitute a significant item in a normal diet;

Principles for the Safety Assessment of Food Additives and Contaminants in Food, World Health Organization, (WHO Environmental Health Criteria, No. 70), p. 111 (1987). For the purposes of this Standard, the phrase "without appreciable health risk" means that there is a reasonable certainty of no harm to consumers if an additive is used at levels that do not exceed those in this Standard. The provisions of this Standard do not sanction the use of an additive in a manner that would adversely affect consumer health.
b. To provide necessary ingredients or constituents for foods manufactured for
groups of consumers having special dietary needs;

c. To enhance the keeping quality or stability of a food or to improve its
sensory properties, provided that this does not change the nature, substance
or quality of the food so as to deceive the consumer; and

d. To provide aids in the manufacture, processing, preparation, treatment,
packing, transport or storage of food, provided that the additive is not used
to disguise the effects of the use of faulty raw materials or of undesirable
(including unhygienic) practices or techniques during the course of any of
these activities.

3. The Permitted Levels of Use of Food Additives

The primary objective of establishing permitted levels of use of food additives
in various food groups is to ensure that the intake of additives does not exceed
the acceptable daily intake (ADI).

The maximum use level of food additives are based in part on FDA commodity
standards, Codex and upon request of interested parties after subjecting their
proposed maximum use level to internationally accepted scientific methods,
ensuring that the same shall not exceed prescribed ADI.

4. Good Manufacturing Practice (GMP)

All food additives covered by these guidelines shall be used under conditions of
good manufacturing practice, which include the following:

a. The quantity of an additive added to food shall be limited to the lowest
possible level necessary to accomplish its desired effect; unless specifically
limited by these guidelines for or to a specific application;

b. The quantity of the additive that becomes a component of food as a result of
its use in the manufacturing, processing or packaging of a food and which is
not intended to accomplish any physical, or other technical effect in the food
itself, is reduced to the extent reasonably possible; and,

c. The food additive is of food grade quality and is prepared and handled in the
same way as a food ingredient.

5. Specifications for the Identity and Purity of Food Additives

Food additives used in accordance with these guidelines should be of appropriate
food grade quality and should at all times conform with the applicable
Specifications of Identity and Purity recommended by the Codex Alimentarius
Commission or, in the absence of such specifications, with appropriate
specifications developed by responsible national or international bodies. In
terms of safety, food grade quality is achieved by conformance of additives to
their specifications as a whole (not merely with individual criteria) and through
their production, storage, transport, and handling in accordance with GMP.
B. Carry-Over of Food Additives into Foods

1. Conditions Applying to Carry-Over of Food Additives from Ingredients and Raw Materials into Foods

Other than by direct addition, an additive may be present in food as a result of carry-over from a raw material or ingredient used to produce the food, provided that:

a. The additive is acceptable for use in the raw materials or other ingredients (including food additives) according to these guidelines;

b. The amount of the additive in the raw materials or other ingredients (including food additives) does not exceed the maximum use level specified in these guidelines;

c. The food into which the additive is carried over does not contain the additive in greater quantity than would be introduced by the use of raw materials, or ingredients under proper technological conditions or manufacturing practice, consistent with these guidelines.

2. Special Conditions Applying to the Use of Food Additives not Directly Authorized in Food Ingredients and Raw Materials

An additive may be used in or added to a raw material or other ingredient if the raw material or ingredient is used exclusively in the preparation of a food that is in conformity with these guidelines, provided that any maximum level applying to the food is not exceeded.

3. Foods for Which the Carry-Over of Food Additives is Unacceptable

Carry-over of a food additive from a raw material or ingredient is unacceptable for foods belonging to the following food categories; unless a food additive provision in the specified category is listed in these guidelines:

a. 13.1 Infant formula, follow-up formula, and formula for special medical purposes for infants

b. 13.2† Complementary foods for infants and young children.

C. Food Category System

The food category system is a tool for assigning food additives uses outlined in these guidelines and applies to all foodstuffs. The food category system applies to all foodstuffs.

The food category descriptors are not to be treated as legal product designations or intended, in any way, for labelling purposes.

The food category system is based on the following principles:

1. The food category system is hierarchical, meaning that when an additive is recognized for use in a general category, it is recognized for use in all its sub-categories, unless otherwise stated.

Similarly, when an additive is recognized for use in a sub-category, its use is recognized in any further sub-categories or individual foodstuffs mentioned in a sub-category.
2. The food category system is based on product descriptors of foodstuffs as marketed, unless otherwise stated.

3. The food category systems take into consideration the carry-over principle. By doing so, the food category system does not need to specifically mention compound foodstuffs (e.g., prepared meals, such as pizza, because they may contain, pro rata, all the additives endorsed for use in their components), unless the compound foodstuff needs an additive that is not endorsed for use in any of its components.

4. The food category system is used to simplify the reporting of food additive uses for assembling and constructing these guidelines.

D. Provision for Mislabeled or Adulterated Food

Any food additive used not in accordance with the requirements of these guidelines shall be deemed to be an act which results in the food being misbranded or adulterated, as the case may be.

For violations under these guidelines, the sanctions provided under RA 9711 and its Implementing Rules and Regulations, and other allied laws and regulations may be imposed as far as applicable and after due notice and summary hearing.

E. Adoption of the Latest Codex General Standard for Food Additives (GSFA)

The latest Codex General Standard for Food Additives (GSFA), and its future revisions/amendments/updates, shall be adopted automatically.

F. Request / Proposal for New and/or Revision of Food Additive Provisions in the GSFA

Request or proposals for new and/or revision of Food Additives provisions in the GSFA shall follow the Codex Procedure for Consideration for the Entry and Review of Food Additives Provisions in the GSFA and shall accomplish the form in Annex B of this Order.

VII. FLAVORING SUBSTANCES

If food additives are to be used as flavoring substances, they shall abide by the Codex Guidelines for the Use of Flavorings (CAC/GL 66-2008) or as listed as safe in US FEMA and/or IOFI.

VIII. PROCESSING AIDS

The use of processing aids shall be guided by at least any one of the following latest revision: Food Chemicals Codex, USFDA CFR Title 21, the latest issuance of Codex Standard on Inventory of Processing Aids (CXA003e or CAC/MISC 3) and the latest issuance of Guidelines on Substances used as Processing Aids (CXG 075e/ CAC/GL 75-2010). For enzymes not listed in the Codex Inventory of Processing Aids, there should be certification from competent authority of country of origin.
X. TRANSITORY PROVISION

Manufacturers, importers, exporters, traders, wholesalers and distributors of processed food products distributed in the Philippines are given a maximum of five (5) years transition period for products with valid Certificate of Product Registration (CPR) starting from the effectivity date of this order to phase out existing stocks and labels, also to reformulate the product(s) to meet the standard specification for the food additive.

XI. FINAL PROVISIONS

A. Separability Clause

If any provision/s in this Order, or application of such provision to any circumstances, is held invalid, the remainder of its provisions shall not be affected thereby.

B. Repealing Clause

This Order repeals AO 88-A. s. 1984, BC 2006-0016, and other administrative order, rules and regulations, and administrative issuances or parts thereof that is/are inconsistent with its provisions.

C. Effectivity Clause

This Order shall take effect 15 days after its publication in an official gazette or in a newspaper of general circulation and filing in the University of the Philippines Law Center.

PAULYN JEAN B. ROSELL-UBIAL, MD, MPH, CESO II
Secretary of Health

Safe use of additive: Dietary intake assessment (as appropriate) | Table 3 additive:  
| □ Yes  
| □ No (Please provide information on dietary intake assessment below) |

Justification that the use does not mislead consumer

(1) For proposed revisions of adopted provisions, the current adopted provision should be provided, with deletions noted in strikethrough text, and changes or additions noted in bold font.

(2) Food Category number and name, as listed in Annex B of the GSFA.

(3) For consistency, the maximum use level should be reported on the same basis as the ADI. A numerical use level should be provided for a food additive assigned a non-numerical ADI. GMP or a numerical use level may be provided for a food additive assigned a non-numerical ADI (e.g. not specified).

(4) Comments on specific restrictions on the use of the food additive to be included as Notes (e.g. limitation of use to specific products in a food category).
ANNEX C

List of Repealed DOH/ FDA Issuances

1. Administrative Order (AO) 88-A s. 1984 refers to Regulatory Guidelines Concerning Food Additives

2. Bureau Circular (BC) 2006-0016 refers to Updated List of Food Additives

3. Administrative Order (AO) 103-A s. 1984 refers to Regulation on Non-nutritive Sweeteners Applicable to Both Food and Drug

4. Administrative Order (AO) 112 s. 1985 refers to Regulation Governing Importation of Food Color Additives

5. Administrative Order (AO) 122 s. 1970 refers to General Regulation Governing the Prohibition of the use of Cyclamic Acid and its Salts (B-63 Food Additives and Preservatives)
