

Draft amendment of the Ministerial Notification No.1163 of the Ministry of Agriculture, Forestry and Fisheries of 2000

Current fertilizer labelling, forces operators to change labels on packaging materials even with a minor change in manufacturing process, leading to increase in production cost. Thus in order to deregulate fertilizer labelling requirements aiming to reduce unnecessary package change, following revisions are to be implemented:

- ① Labelling concerning fertilizer using raw materials of cattle are to be unnecessary
- ② Labelling related to animal-derived protein (other than cattle) and bovine-derived protein are to be unified.
