REVISION OF KENYA STANDARDS

In order to keep abreast of progress in industry, Kenya Standards shall be regularly reviewed. Suggestions for improvements to published standards, addressed to the Managing Director, Kenya Bureau of Standards, are welcome.

Cheeses in brine — Specification
Foreword

This Kenya Standard was prepared by the Milk and Milk Products Technical Committee under the guidance of the Standards Projects Committee, and it is in accordance with the procedures of the Kenya Bureau of Standards.

Cheese is the ripened or unripened soft, semi-hard, hard, or extra-hard milk product, which consists of high concentration of the constituents of milk, principally fat, casein and soluble salts, together with water in which small amounts of soluble salts, lactose, and albumin from milk is coagulated. The milk is coagulated by means of rennet and/or other protease enzymes. It is therefore important to use milk of good quality to obtain high quality cheese.

There are various types of cheese that are produced and marketed worldwide. This standard specifies the general requirements for all types of cheeses in brine produced and marketed in Kenya.

During the preparation of this standard, reference was made to the following document:

Group standard for cheese in brine, CXS 208-1999

Acknowledgement is hereby made for the assistance derived from these sources.
Cheeses in brine — Specification

1 Scope

This Kenya Standard specifies the general requirements and methods of sampling and test for all cheeses in brine intended for direct consumption and/or for further processing in conformity with the description in Section 3 of this Standard.

Subject to the provisions of this Standard, standards for individual varieties of Cheeses in Brine may contain provisions which are more specific than those in this Standard.

3 DESCRIPTION

Cheeses in Brine are semi-hard to soft ripened cheeses in conformity with the general Standard for Cheese (KS 28-1). The body has a white to yellowish colour and a compact texture suitable for slicing, with none to few mechanical openings. The cheeses have no actual rind and have been ripened and preserved in brine until delivered to, or prepacked for, the consumer. Certain individual Cheeses in Brine contain specific herbs and spices as part of their identity.

4 ESSENTIAL COMPOSITION AND QUALITY FACTORS

4.1 Raw materials

Milk and/or products obtained from milk complying with the relevant Kenya Standards.

4.2 Permitted ingredients

The following ingredients shall be permitted in cheese:

a) Starter cultures of harmless lactic acid and/or flavour producing bacteria and cultures of other harmless microorganisms.

b) Safe and suitable enzymes.

c) Sodium chloride complying with KS 229

d) Potable water complying with KS EAS 153.

e) Herbs and spices where part of the identity of the Cheese in Brine complying with the relevant Kenya standards

4.3 Compositional requirements

The following requirements given in Table shall be applicable to I cheeses in brine.

However, this requirements shall not preclude the designation of more specific requirements in l standards for individual varieties of Cheeses in Brine

6 HYGIENE

6.1 It is recommended that the products covered by the provisions of this standard be prepared and handled in accordance with the Code of Hygienic Practice for Milk and Milk Products (KS 1552) and other relevant texts such as Codes of Hygienic Practice and Codes of Practice. The products should comply with any microbiological criteria established in accordance with the Principles and Guidelines for the Establishment and Application of Microbiological Criteria Related to Foods (KS CXG 21-1997).

6.2 The products shall comply with microbiological criteria established in accordance with Table 4 below.

Table 4 — Microbiological requirements for cheeses in brine

7 Contaminants

The products covered by this standard shall comply with the maximum levels for contaminants that are specified for the product in the General Standard for Contaminants and Toxins in Food and Feed (CXS 193-1995).

7.1 Heavy metals

When tested in accordance with AOAC 999.10 or KS ISO/TS 6733, the level of lead (Pb) shall not exceed 0.02 mg/kg.

7.2 Pesticide residues

Cheeses in brine shall conform to maximum limits residues set by Codex Alimentarius Commission.

7.3 Mycotoxin residues

© KEBS 2019 — All rights reserved
When tested in accordance with ISO 14501 the level of Aflatoxin M1 shall not exceed 0.50 µg/kg.

7.4 Veterinary drugs residues

Cheeses in brine shall conform to maximum tolerable residue limits for antibiotics and other veterinary drugs set by Codex Alimentarius Commission.

8 Packaging

The products shall be packed in food grade material that ensures product safety and integrity.

9 Labelling

In addition to the provisions of the General Standard for the Labelling of Prepackaged Foods (KS EAS 38), Use of Nutrition and health claims (KS EAS 805), and the General Standard for the Use of Dairy Terms (KS CXS 206-1999), the following specific provisions apply

9.1 Name of the food

The name of the food shall be cheese brine. However, the word “cheese in brine” may be omitted in the designation of an individual cheese in brine variety reserved by a standard for individual cheeses in brine, and, in the absence thereof, a variety name specified in the national legislation of the country in which the product is sold, provided that the omission does not create an erroneous impression regarding the character of the food.

9.2 Declaration of milk fat content

The milk fat content shall be declared in a manner found acceptable in the country of sale to the final consumer, either (i) as a percentage by mass, (ii) as a percentage of fat in dry matter, or (iii) in grams per serving as quantified in the label provided that the number of servings is stated.

Additionally, the following terms may be used:

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>High fat</td>
<td>(if the content of FDM is above or equal to 60%)</td>
</tr>
<tr>
<td>Full fat</td>
<td>(if the content of FDM is above or equal to 45% and less than 60%)</td>
</tr>
<tr>
<td>Medium fat</td>
<td>(if the content of FDM is above or equal to 25% and less than 45%)</td>
</tr>
<tr>
<td>Partially skimmed</td>
<td>(if the content of FDM is above or equal to 10% and less than 25%)</td>
</tr>
<tr>
<td>Skim</td>
<td>(if the content of FDM is less than 10%)</td>
</tr>
</tbody>
</table>

9.3 Name of manufacturer

In the case of cheese for export, the original cheese, or where not possible, the original pack or prepared consumer pack shall be marked with the name of the manufacturer or exporter in clear lettering.

9.4 Country of manufacture (origin)

In the case of cheeses sold in the home market and designated by the name of cheese not originating in the producing country, the original cheese, or where not possible, the original pack or prepared consumer pack shall be marked with 'the name, or other clear indication, of the producing country'.

Other clear indication could include things such as a clear statement of the full address of the manufacturer or the name of a well-recognized state, region or province of the producing country.

10.5 The name and address of the manufacturer, packer, distributor, importer, exporter or vendor of the food shall be declared.

10.6 Net contents

The net contents shall be declared by weight in either the metric (“Système International” units) or as required by the country in which the product is sold.
10.7 List of Ingredients

A complete list of ingredients shall be declared on the label in descending order of proportion.

10.8 storage instructions or conditions for use

10.9 date of manufacture

10.10 Expiry date;

10.11 batch code/number

10.12 lot identification

However, lot identification, and the name and address of the manufacturer or packer may be replaced by an identification mark, provided that such a mark is clearly identifiable with the accompanying documents

10 METHODS OF SAMPLING AND ANALYSIS

10.1 Sampling shall be carried out in accordance with the latest version of KS ISO 707“Milk and Milk products - Guidance on sampling” and in KS ISO 55381: Milk and milk products - Sampling - Inspection by attributes.

10.2 Analysis for cheese shall be carried out in accordance to appropriate standard methods declared in this standard. Other test may be performed as per the methods given in the latest AOAC/ Codex/ ISO and other internationally recognized methods

10.3 Special requirements for Cheese in Brine:

A representative piece of cheese is placed on a cloth or on a sheet of absorbent paper for 5 to 10 min. A slice of 2–3 cm is cut off and sent to the laboratory in a sealed insulated box for analysis.
