● : Commodities for which MRLs are lowered. These MRLs are to be taken effect on 14 July 2021.

○ : Commodities for which MRLs are raised. These MRLs have been taken effect on 14 July 2020.

Note: The residue definition is Carbaryl only.

* The uniform limit 0.01 ppm is applied to commodities for which renewed MRLs are not given in this table and to commodities not listed above.

* Shaded figures indicate provisional MRLs.

* Diagonal line means a food category to which MRL applies is not set.

* Food categories "Makuwauri melon", "Unshu orange, pulp", "Citrus natsudaikai, pulp" and "Citrus natsudaikai, peels" are deleted, whereas new ones are established in foods categorized as "Makuwauri melons (whole commodity after removal of stems)", "Unshu orange (whole commodity)" and "Citrus natsudaikai, whole", respectively, followed by the current food category system for MRLs for agricultural and veterinary chemicals in Japan (These MRLs are to be taken effect on 14 July 2021).

※) For "Wheat flour (except whole grain)", "Wheat germ", "Wheat bran", "Maize oil (crude)", "Soybean oil (crude)" and "Edible olive oil (limited to virgin oil)", the MRLs of their raw commodities (Wheat, Corn (maize, including pop corn and sweet corn), Soybeans, dry, Other fruits) are applied taking into account of their processing factors. Thus MRLs are not established in these commodities.

JMPR estimates processing factors at 0.09 for Wheat flour, 0.49 for Wheat germ, 1 for Wheat bran, 3.3 for crude maize oil, 0.9 for crude soybean oil and 0.82 for edible olive oil.
