

Emergency phytosanitary measures for the importation of
Solanum spp. and *Capsicum* spp. seeds.

The emergency phytosanitary measures for the importation of *Solanum* spp. and *Capsicum* spp. seeds are proposed to mitigate the biosecurity risk posed by 4 viruses and 6 viroids: *Tomato yellow leaf curl virus* (TYLCV), *Tomato brown rugose fruit virus* (ToBRFV), *Tomato mottle mosaic virus* (ToMMV), *Pepino mosaic virus* (PepMV), *Columnnea latent viroid* (CLVd), *Potato spindle tuber viroid* (PSTVd), *Tomato apical stunt viroid* (TASVd), *Tomato chlorotic dwarf viroid* (TCDVd), *Tomato planta macho viroid* (TPMVd) and *Pepper chat fruit viroid* (PCFVd).

The emergency measures to regulate these viruses and viroids on the seeds are as follows:

The importation of the seeds of *Solanum* spp. and *Capsicum* spp. shall be accompanied by the phytosanitary certificate issued by the plant quarantine authority of the exporting country which states that seeds have been laboratory tested before exporting and found free from *Tomato yellow leaf curl virus* (TYLCV), *Tomato brown rugose fruit virus* (ToBRFV), *Tomato mottle mosaic virus* (ToMMV), *Pepino mosaic virus* (PepMV), *Columnnea latent viroid* (CLVd), *Potato spindle tuber viroid* (PSTVd), *Tomato apical stunt viroid* (TASVd), *Tomato chlorotic dwarf viroid* (TCDVd), *Tomato planta macho viroid* (TPMVd) and *Pepper chat fruit viroid* (PCFVd), otherwise, the seeds will be destroyed or reshipped.
